
LIGHT ROOM PRESETS

Installation is easy, just follow the steps:

STEP 1 //////////

Download the presets and extract the zip file on desktop.

STEP 2 //////////

Copy the folders that contain the presets.

STEP 3 //////////

Launch Lightroom. and go to the Edit Menu and then select Preferences > Go to the Presets tab of the preferences window. have you checked the “Store presets with catalog box”? If you’ve installed presets before and you did store them with the catalog, then yes, you do want to check this box. If this is your first time to install presets, leave it unchecked. If you install our presets and can’t find other presets that you’ve already installed, repeat the installation process with this box in the opposite setting.

STEP 4 //////////

Click on the folder that says “Show Lightroom Presets Folder.” Inside this new folder, open Lightroom, then Develop Presets.

STEP 5 //////////

Paste your copied presets into this Develop Presets folder.

Final Step //////////

Close Lightroom. Next reopen it and your presets will appear. To locate them, go to the Develop Module, and look for your new presets on the left.

Thank you so much for the purchase
