

Widget Options : Selection

- Text selection is selecting line/lines of text in a widget
- Some text selection options are as follows

Text / Item Selection

selectbackground

selectborderwidth

selectforeground

exportselection

- An example for this is

```
from tkinter import *
from tkmacosx import *

win = Tk()
win.title('My First Application')
win.geometry('600x400')

e1 = Entry(win, selectforeground='yellow', selectbackground='red', selectborderwidth=10)
e1.pack()

lb1 = Listbox(win, selectforeground='yellow', selectbackground='red', selectborderwidth=10)
lb1.insert(0, 'AAAA')
lb1.insert(1, 'BBBB')
lb1.insert(2, 'CCCC')
lb1.insert(3, 'DDDD')
lb1.pack()

win.mainloop()
```

- exportselection means when we select something else in the widget the old selected section will get deselected and the focus now is on the current selected item in the widget
- If exportselection takes TRUE / FALSE values
