Why Build an AI-Powered Project Management Copilot?

1. Managing projects is complex—tasks, deadlines, risks, and team updates.

2. AI helps process and analyze project updates, reducing manual effort.

3. A custom GPT can:
   a. Summarize progress from reports and notes
   b. Identify risks & delays based on the data you provide
   c. Break down tasks & milestones into structured action plans

What's next for the Copilot?

1. **Your AI copilot is ready—now it's about making it work for you.**

2. **Refine and adapt—custom prompts, project updates, and workflow tweaks.**

3. **Up next:**
    a. AI-Powered Project Planning – Smarter plans, roadmaps & task prioritization.
    b. AI for Meetings & Rituals – Automating agendas & tracking action items.
